

# CONCRETE AND MANHOLE REHABILITATION

## **INFRAGARD TOP COAT**

Two component 100% solids thermosetting epoxy top coat.

- Spreads easily
- Convenient to use
- Outstanding results on small or big jobs
- Corrosion resistant
- Creates a new lining within the manhole
- Stons Leaks

## **CHIM COAT**

Scientifically formulated flexible two part epoxy chimney coating.

- Expands and contracts with changing temperatures
- + All the same features as Infragard

## **PRIMER/SEALER**

- Two part epoxy system
- Easy application with a garden sprayer to wet or dry surfaces

# **FEATURES**

- Easy to apply trowel on application
- Cost effective
- Environmentally friendly/Non Hazardous
- Zero VOCs
- Minimal inconvenience to traffic
- Ambient cure two part Epoxy
- High performance corrosion resistance
- High compression and tensile strength
- Conforms to any shape
- Bonds to both damp and dry surfaces
- Prevents infiltration and ex-filtration
- High performance durability
- Technical support

The Infrastructure Repair Concrete Manhole Rehabilitation Products are two component 100% solids thermosetting epoxy that are to be applied from 120 to 150 mils or as required by qualified design engineers to either wet or dry surfaces.

# Infrastructure Repair Systems, Inc. Concrete and Manhole Rehabilitation Products

#### **ASTM 543**

Chemical Resistance Test Results for Domestic Sanitary Sewer Applications Minimum One Month at 73.4° F - 23° C

<b>Chemical Solution</b>	% Of Concentration
Tap Water pH 6-9	0.0%
Nitric Acid	0.0%
Phosphoric Acid	1.8%
Sulfuric Acid	17.9%
Gasoline	6.5%
Vegetable Oil	1.2%
Detergent	0.01%
Soap	0.01%

### Table 2

**Mechanical and Physical Properties** 

Test Method	Results		
<b>ASTM D 638</b>	Tensile Strength	Tensile Modulus	Elongation Strength
	8,228 psi	463,516 psi	1.886%
<b>ASTM D 695</b>	Compressive Strength	Compressive Modulus	
	13,627 psi	542,290	
<b>ASTM D 790</b>	Flexural Strength	Flexural Modulus	
	16,917 psi	465,306 psi	
ASTM D 2240	Hardness Mold Side		
	84.7	Average after high & lov	v reading discarded

#### Tensile Pull Off Strength

Test Method	Substrate Tensile Pull Off Strength	
<b>ASTM C 297</b>	Steel	1101 psi (average 2 tests)
	Concrete	>464 psi (average 3 tests)

Visual Observations Steel Substrate: 60% Cohesive Failure of Epoxy; 40% Adhesion failure Concrete Substrate: 100% Failure of Concrete Substrate

Concrete Pulled Out @ 464 psi.
